KUALA LUMPUR

FLORAL ORDERING & DELIVERY MANAGEMENT

SWE/137/24B

1 PROJECT BRIEF

This project develops Bloom and Bunch Kuala Lumpur, a floral ordering and delivery management application that allows customers to browse bouquets, customise arrangements, and schedule deliveries. It addresses limited bouquet customisation, inefficient order communication, and unclear delivery progress by bringing order details into one platform. Customers can select flowers, wrapping styles, and add-ons, while florists, riders, and administrators manage preparation and delivery through dedicated workspaces. Built using Flutter and Firebase, the system provides real-time order-status updates from order placement to customer receipt confirmation.

2 PROJECT OBJECTIVES

1. To develop a floral ordering application that allows customers to customise bouquets according to their preferences.

2. To improve communication between customers and florists through clear, centralised order details.

3. To provide flexible delivery scheduling and real-time order-status updates.

3 SPECIFICATIONS

SOFTWARE

Flutter & Dart - app interface
JavaScript & Node.js - backend
Firebase - authentication, Firestore, storage, functions, hosting & notifications
Google Maps - delivery locations
ToyyibPay - sandbox payments

4 PROJECT FEATURES

1. Personalised bouquet customisation
2. Centralised order management
3. Delivery scheduling and order tracking

5 RESULTS & FINDINGS

QUESTIONNAIRE FINDINGS

75%	67.5%	65%
Fast delivery	Easy interface	Same-day first

Customer needs; not measured app performance.

6 PROJECT DESIGN

REPLACE EACH PLACEHOLDER WITH YOUR ACTUAL APP SCREENSHOT

1. CUSTOMER

Bouquet customisation screen

PLACE YOUR SCREENSHOT HERE

Keep the screen readable and hide personal details

Choose flowers, quantities, wrapping, and add-ons.

2. FLORIST

Order details / preparation screen

PLACE YOUR SCREENSHOT HERE

Keep the screen readable and hide personal details

View structured order details and update preparation.

3. RIDER

Delivery details screen

PLACE YOUR SCREENSHOT HERE

Keep the screen readable and hide personal details

View delivery information and update delivery progress.

4. ADMINISTRATOR

Admin dashboard screen

PLACE YOUR SCREENSHOT HERE

Keep the screen readable and hide personal details

Oversee products, stock, orders, and staff.

ORDER WORKFLOW

Customer orders → **Florist prepares** → **Rider delivers** → **Customer confirms**

7 CONCLUSION

Bloom and Bunch Kuala Lumpur brings floral ordering, bouquet customisation, and delivery management into one application. Customers can personalise bouquets, schedule deliveries, and follow order progress, while florists, riders, and administrators coordinate fulfilment through shared order details. Built using Flutter and Firebase, the system addresses the project's focus on customisation, communication, and delivery visibility. Further user evaluation is needed to assess its usability and effectiveness in daily store operations.
